

## **Roka Powder CS**

# Waterproofing Agent for Concrete and Plaster

Roka Powder CS is calcium stearate dispersion which functions as a water protective additive to cement based construction forms.

## **Uses & Advantages:**

- Readily dispersible in concrete and mortar mixes.
- Provides protection from corrosion.
- Provides protection from frost damage.

# Fields of Application:

Roka Powder CS is designed to provide resistance to water penetration to building structures such as concrete blocks and masonry walls.

### **Technical Information:**

Color	Brown
Consistency	Liquid
Density at 20°C	1.14
Solid Content	25%

Viscosity	< 0.8 cps
рН	8.5
Free Alkali	Nil
Chloride Content	Nil
Dosage	1 – 2 kg per 50 kg bag of cement
Storage Conditions	Store at room temperature to prevent from
	freezing/damaging.

### **Direction for Use:**

Roka Powder CS is readily dispersible in concrete and mortar mixes assuring a uniform distribution for optimum protection.

### **Important Note:**

The information provided in this data sheet is based on ongoing development efforts and extensive field experience. While we strive to ensure the accuracy and reliability of the information, we cannot assume responsibility for any work performed using our materials, as we have no control over application methods, site conditions, and other factors. Due to ongoing research and development in our laboratories, we recommend that customers verify that this data sheet has not been replaced by a more recent publication.

All products are sold under our standard conditions of sale, which are available upon request.
